

TIRESEAL®

Preventive Tire Sealant Manufactured by Texas Refinery Corp

Stops Downtime Before It Starts

Why It Works:

- ✓ Seals punctures from the inside out
- ✓ Special fibers suspended in liquid
- ✓ Automatically flows to punctures as the tire rotates
- ✓ Forms a soft, flexible internal plug
- ✓ Stays liquid — won't dry out or harden

No mess. No chunks. No rim damage.

Designed for Preventive Maintenance

TIRESEAL stays in the tire to prevent air loss before you ever notice a puncture.

Many operators never know a puncture occurred — because the tire never goes flat.

Why Operators Use It:

- ✓ Seals punctures up to ½ inch
- ✓ Reduces downtime and service calls
- ✓ Lowers operating and repair costs
- ✓ Safe for tires and rims
- ✓ Anti-freeze protection for cold weather

Built for Tough Equipment

- Tractors & farm implements
- Sprayers, loaders & skid steers
- Construction & earth-moving equipment
- Industrial forklifts
- Turf equipment & golf carts
- Off-road, low-speed applications

 *Not recommended for on-road vehicles over 45 mph.*

Bottom Line:

TIRESEAL keeps equipment working, reduces downtime, and protects tires from the inside out.

Avoid one flat, and it often pays for itself.
